Please add the following new claims as follows:

-- 21. An active matrix type organic luminescent display device comprising:
a substrate;
at least one first signal line and one second signal line intersecting to each other
formed over said substrate;
a first thin film transistor formed over said substrate wherein said first signal line is
connected to a gate of said first thin film transistor and said second signal line is connected
to source or drain of the first thin film transistor;
a second thin film transistor formed over said substrate wherein the gate of said
second thin film transistor is electrically connected to said second signal line through said
first thin film transistor;
an organic electroluminescent element formed over said substrate; and
a power supply line electrically connected to said organic electroluminescent element
through said second thin film transistor.

22. The display device according to claim 21, wherein a video signal is applied to
the gate of the second thin film transistor through said second signal line and said first thin
film transistor.

23. The display device according to claim 21 wherein said power supply line
extends in parallel with said second signal line.

24. An active matrix type organic luminescent display device comprising:
a substrate;
at least one first signal line and one second signal line intersecting to each other
formed over said substrate;
a first thin film transistor formed over said substrate wherein said first signal line is
connected to a gate of said first thin film transistor;
